

Seasonal Variations

FACT SHEET

SOMETIMES CLIMATE CHANGE CAN CHANGE THE TIMING OF SEASONS. FOR EXAMPLE, OUR HURRICANE SEASON HERE IN CAYMAN MIGHT START TO COME EARLIER THEN WE ARE USED TO!

RAINFALL

During our rainy season, it is likely that we will start seeing more rain falling from the clouds then before! This can cause flooding and other problems for our island!

Droughts

DROUGHTS ARE PERIODS WHEN THERE IS NO RAIN AND EVERYTHING GETS VERY DRY! CLIMATE CHANGE MIGHT CAUSE MORE DROUGHTS IN PLACES THAT HAVE NOT EXPERIENCED THEM BEFORE!

CHANGES TO WEATHER PATTERNS

Imagine storms are like big, swirling dancers in the sky. But because our Earth is changing, these dancers sometimes decide to take different paths. When they do, they bring different kinds of weather to new places. This can be a bit surprising and sometimes cause extra challenges for those areas.
